Risk Assessment

Risk	Responsibility	Likelyhood	Impact level	Evaluation	Control measures	Response
Internet fails	Developer	Medium	Low	Connection with server fails so online services such as gitHUB will not be available	Make sure connections are stable and use LAN cables when possible	Use mobile data to hotspot as a backup
Database fails	MYSQL	Low	High	MYSQL or computer crashes resulting in database failure	Create backups of the database local and online	Use schema to re create the database
Broken code deployed	Developer	High	High	Deployed final product may have issues, bugs, missing requirements etc.	Make sure testing is completed periodically and standards are followed	Revert back to most recent correct version
GitHUB branches Delete code	Developer	Low	High	Feature branches could get replaced or over written and therefore lost	Make sure correct steps have been taken when branching and pushing	Make sure local back up copies are always held
